Azure AD as the control plane

Identity as the core of enterprise mobility

Single sign-on to any app

- ▶ Connect and sync on-premises directories with Azure
- ▶ 2700+ pre-integrated popular SaaS apps and self-service integration via templates
- ▶ Easily publish on-premises web apps via Application Proxy + custom apps

Azure AD Application Proxy

Azure Active Directory Application Proxy

- ▶ Cloud service that allows users to remotely access on-prem apps from securely from any device and any place
- ▶ Different types of web-apps and APIs can be 'published'
- ▶ Users connect to the 'published' apps and cloud service routes traffic to the backend applications via 'connectors'
- ▶ Connectors are usually deployed inside the corpnet next to the applications. They maintain an out-bound connection to the service
- ▶ Multiple connectors can be deployed for redundancy, scale and access to different sites

AAD App Proxy – How does it work?

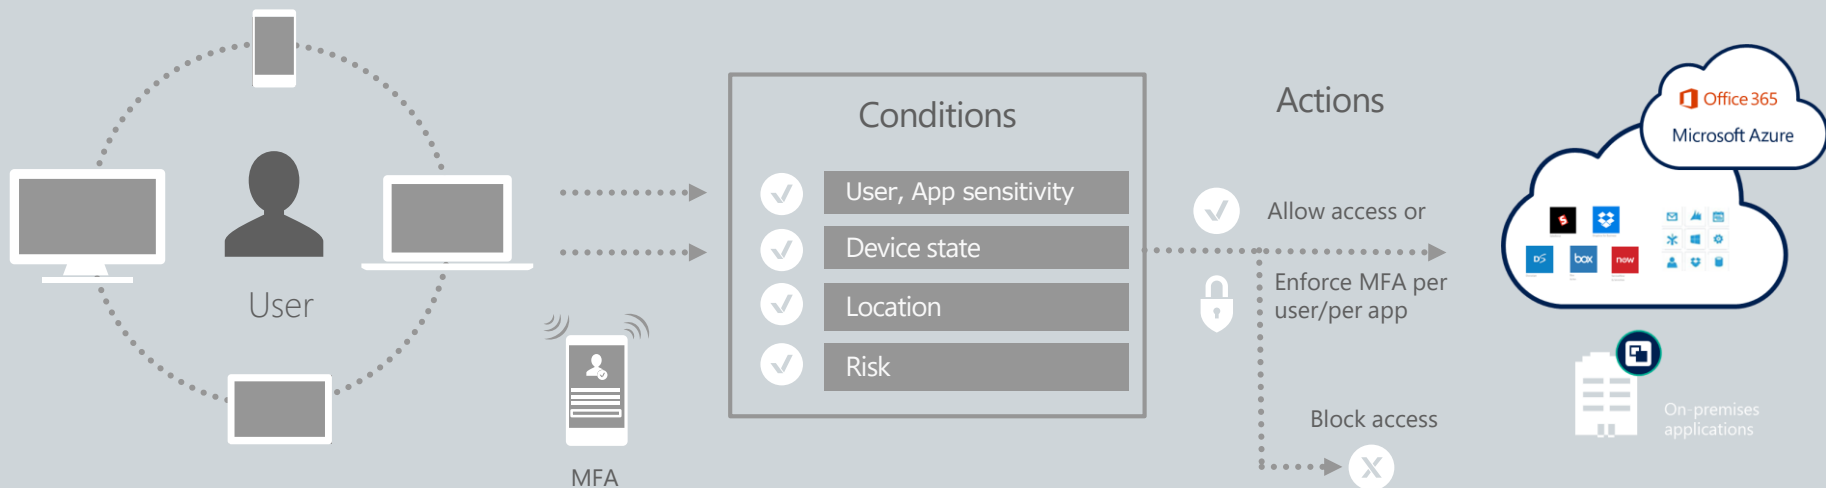

Conditional Access

Conditional Access for Identities and Devices

Recap

- Manage Applications in the Azure Portal with the New Management Experience
- Enterprise Apps and App Registrations
- Conditional Access for Identity and Devices
- End User Experience
